ABSTRACTED-PUB-NO: JP 63208531 A  
BASIC-ABSTRACT:

Whole grass of Portulaca oleracea L is immersed in middle warmed water, then dried for more than 60 days avoiding direct sunshine.

USE/ADVANTAGE - Prepn. is effective against diabetics. Commonly, Portulaca oleracea L is thought of only as a weed, or used as private medicinal herbs e.g. antipyretic, antidote, swelling subsiding drug, improving drug of whooping cough, and used only by boiling with water, so effects are weak. By processing as above, the extract which lowers blood sugar value of the diabetics, can be

obtd. from Portulaca oleracea L. When the specifically prepd. extract is administered orally to the diabetic of blood sugar value more than 220, the value is lowered to about 150 after 14 days and normalised. Also similar effects are obtd. when administered to other diabetics. As prepn. of whole grain this is cut into fragments, packed in tea pack, and boiled with H2O, and the extract may be drunk. Also the hot H2O extract of the whole grain is prepd. as solns. or solidified and may be administered orally. The same effect is obtd.
